Summary

I am a results-oriented Software Engineer with a BS in Computer Science and nearly 2 years of experience in C#/.NET development and systems engineering. Proven ability to maintain, enhance, and architect software solutions, including reverse-engineering and modernizing legacy applications for large-scale deployment. Seeking a challenging C# Software Developer role focused on backend development to leverage my technical skills and contribute to innovative software solutions.

Professional Experience

Hunter Engineering Co. | R&D Engineer I (Computer Systems) | May 2024 – Present

- Independently reverse-engineered a critical legacy C++ WinForms PC Reimaging application subsequently designing, developing, and deploying its C#/.NET WinForms replacement.
- Maintain, enhance, and add new features for C# WinForms application utilized in factory PC assembly and order entry process.
- Maintain and create new Windows operating system images utilizing Windows deployment and imaging tools for use in multiple products.
- Coordinate ordering, testing, and evaluation of desktop PC components for use in new and existing products.

Hunter Engineering Co. | Associate Engineer | Bridgeton, MO | July 2023 – May 2024

- Maintained and refactored multiple existing software deployment installers written in InstallShield's InstallScript.
- Maintained and added new features to multiple existing C#/.NET/WinForms factory assembly programs.
- Evaluated and compared PC peripherals from different manufacturers for use in company products.

Education

B.S. Computer Science, Minor Data Science | Lindenwood University | St. Charles, MO

- May 2023 – 3.43/4.0 GPA – Interfraternity Council President – Delta Tau Delta Vice President

Featured Projects

SimpleLift ([Github](#)) (Live)

- Full-stack containerized exercise tracking app built with React, Typescript, Tailwind, MariaDB, and ASP.NET Core.

Skills

- Languages & Databases:** C#, SQL, C++, MariaDB, MySQL, PowerShell, Bash (Basic), & InstallScript.
- Frameworks:** ASP.NET Core, .NET Framework, React, & WinForms.
- Tools:** Docker, Docker Compose, Git, Team Foundation Server (TFS), Linux (CLI), Visual Studio, & Windows Server/Desktop.
- Concepts:** Object-Oriented Programming (OOP), Networking Basics, Containerization, & Virtualization.
